

# *Dependency Grammars and Parsing - Introduction*

Pawan Goyal

CSE, IIT Kharagpur

Week 6, Lecture 1

## Phrase Structure

# Dependency Structure Representation

# Dependency Structure

- Connects the words in a sentence by putting arrows between the words.
- Arrows show relations between the words and are typed by some grammatical relations.
- Arrows connect a head (governor, superior, regent) with a dependent (modifier, inferior, subordinate).
- Usually dependencies form a tree.

# Criteria for Heads and Dependents

*Criteria for a syntactic relation between a head  $H$  and a dependent  $D$  in a construction  $C$*

- $H$  determines the syntactic category of  $C$ ;  $H$  can replace  $C$ .
- $D$  specifies  $H$ .
- $H$  is obligatory;  $D$  may be optional.
- $H$  selects  $D$  and determines whether  $D$  is obligatory.
- The form of  $D$  depends on  $H$  (agreement or government).
- The linear position of  $D$  is specified with reference to  $H$ .

# Some Clear Cases

Construction	Head	Dependent
Exocentric	Verb	Subject ( <b>sbj</b> )
	Verb	Object ( <b>obj</b> )
Endocentric	Verb	Adverbial ( <b>vmod</b> )
	Noun	Attribute ( <b>nmod</b> )

## *Phrase structures explicitly represent*

- Phrases (nonterminal nodes)
- Structural categories (nonterminal labels)

## *Phrase structures explicitly represent*

- Phrases (nonterminal nodes)
- Structural categories (nonterminal labels)

## *Dependency structures explicitly represent*

- Head-dependent relations (directed arcs)
- Functional categories (arc labels)

# Dependency Graphs

- A dependency structure can be defined as a directed graph  $G$ , consisting of
  - ▶ a set  $V$  of nodes,
  - ▶ a set  $A$  of arcs (edges),

- A dependency structure can be defined as a directed graph  $G$ , consisting of
  - ▶ a set  $V$  of nodes,
  - ▶ a set  $A$  of arcs (edges),
- Labeled graphs:
  - ▶ Nodes in  $V$  are labeled with word forms (and annotation).
  - ▶ Arcs in  $A$  are labeled with dependency types.

# Dependency Graphs

- A dependency structure can be defined as a directed graph  $G$ , consisting of
  - ▶ a set  $V$  of nodes,
  - ▶ a set  $A$  of arcs (edges),
- Labeled graphs:
  - ▶ Nodes in  $V$  are labeled with word forms (and annotation).
  - ▶ Arcs in  $A$  are labeled with dependency types.
- Notational convention:
  - ▶ Arc  $(w_i, d, w_j)$  links head  $w_i$  to dependent  $w_j$  with label  $d$
  - ▶  $w_i \xrightarrow{d} w_j \Leftrightarrow (w_i, d, w_j) \in A$
  - ▶  $i \rightarrow j \equiv (i, j) \in A$
  - ▶  $i \rightarrow^* j \equiv i = j \vee \exists k : i \rightarrow k, k \rightarrow^* j$

# Formal conditions on Dependency Graphs

- $G$  is connected:
  - ▶ For every node  $i$  there is a node  $j$  such that  $i \rightarrow j$  or  $j \rightarrow i$ .
- $G$  is acyclic:
  - ▶ if  $i \rightarrow j$  then not  $j \rightarrow^* i$ .
- $G$  obeys the single head constraint:
  - ▶ if  $i \rightarrow j$  then not  $k \rightarrow j$ , for any  $k \neq i$ .
- $G$  is projective:
  - ▶ if  $i \rightarrow j$  then  $j \rightarrow^* k$ , for any  $k$  such that both  $j$  and  $k$  lie on the same side of  $i$ .

# Formal conditions on Dependency Graphs

- $G$  is connected:
  - ▶ For every node  $i$  there is a node  $j$  such that  $i \rightarrow j$  or  $j \rightarrow i$ .
- $G$  is acyclic:
  - ▶ if  $i \rightarrow j$  then not  $j \rightarrow^* i$ .
- $G$  obeys the single head constraint:
  - ▶ if  $i \rightarrow j$  then not  $k \rightarrow j$ , for any  $k \neq i$ .
- $G$  is projective:
  - ▶ if  $i \rightarrow j$  then  $j \rightarrow^* k$ , for any  $k$  such that both  $j$  and  $k$  lie on the same side of  $i$ .

# Formal Conditions: Basic Intuitions

## Connectedness, Acyclicity and Single-Head

- **Connectedness:** Syntactic structure is complete.
- **Acyclicity:** Syntactic structure is hierarchical.
- **Single-Head:** Every word has at most one syntactic head.
- **Projectivity:** No crossing of dependencies.

# Dependency Parsing

## Dependency Parsing

- **Input:** Sentence  $x = w_1, \dots, w_n$
- **Output:** Dependency graph  $G$

## Parsing Methods

- Deterministic Parsing
- Maximum Spanning Tree Based
- Constraint Propagation Based
